a) Weak Role based prompting:

b) Strong Role based prompting:

Even though plants don't have kitchens or grocery stores, they actually cook their own food! This process is called photosynthesis. Let's break it down using something you probably know well: making a pizza.

The Plant's "Kitchen"

A plant's kitchen is its leaves. Inside the leaves, there is a special green "chef" called chlorophyll. This chef is what makes the leaves green, and its job is to catch the energy from the sun.

The Secret Recipe
